Commissioners
Superintendent's Report

October 1, 2026

System Usage	2026	2025
September	8,677,641	9,908,892
Daily Average	289,255	330,296
Max Daily	431,729	457,686
Year to Date	70,923,417	70,200,553

1. Meter Reading started today.
2. The pump station and annex roofs are done and were under budget. Jon and Tony raked around the building to prepare for bark mulch at the pump station and Jon has been cleaning and painting the roof vents.
3. DN Tank completed the repairs to the tank.
4. Sean Williamson trapped five beaver from the mill pond below Morgan Pond and pulled the dam. He believes there is one more and it has gone into Morgan Pond. We will continue to monitor the activity at the dam.
5. Stonkus Hydraulics did an assessment of the Booster Station altitude valve and pilot system. They said the altitude valve, pilot valve and backpressure valve all need to be rebuilt. The pilot valve and backpressure valve can be replaced. I have provided you with the quote.
6. We went to Morgan Pond and worked on the dam spillway and cleared the natural spillway at the twin culverts. We will finish up the dam spillway when the pond level goes down.
7. I called Weathercheck about the roof warranty but have not heard back yet.
8. We had a water main break on Squires Lane last Thursday. The Town of New London DPW and Seneca and Sons assisted.

Workload
Backflow Testing
Curb and Gate Repairs
Spillway @Pond
Meter Reading
Quarterly Reports

Respectfully Submitted,

Rob Thorp
